

Company overview

Getz Clinical

Elegant eHealth solutions for every hospital

Getz Clinical

Getz Clinical is a leading developer of perioperative information management systems that improves the accuracy, security and accessibility of patient data.

Our flagship product, GCC, is a fully integrated suite of software modules that automates patient record keeping across the perioperative continuum of care.

GCC

GCC is a fully integrated suite of clinical software modules designed specifically for the acute care environment.

Our range includes modules to automatically capture patient data in the preoperative, intraoperative and postoperative phases, as well as acute pain management recording. Our modules automatically chart anaesthesia data directly from patient monitors. Touch screens installed in operating theatres and recovery bays enable clinicians to annotate patient data as well as chart drugs and fluids.

Our global operations span four continents and our customers include more than 50 hospitals and medical centres across Asia, Europe, Africa and Australasia.

Each patient’s medical history is collated into a consolidated record that is accessible from any secure portal. We integrate with patient administration systems and other clinical information systems so patient data can be accessed wherever it’s needed.

Our enterprise-level subscription offering is scalable so it grows as your hospital grows. The architecture of our modules complies with HL7 standards, ensuring seamless interfacing with hospital systems and all models of patient monitoring equipment.

Proven benefits

GCC confidently replaces paper records. Subscriptions to our modules constitute less than 1% of typical theatre operating costs but bring significant savings to hospitals through improved processes and more accurate records.

We have improved theatre and PACU record keeping efficiencies by up to 93% and pre-admission clinic running costs by 60%.

Comprehensive reporting tools and data analysis functions allow for improvements in hospital operational and financial performance. GCC provides reports on the use of blood products, the level of drug usage per case and reconciliation of drug wastage.

We have demonstrated return on investment of well over 500% for existing customers.

	Preoperative	Intraoperative	Postoperative
Suite of modules	Individual modules		
Anaesthesia	<i>PreOp</i>	<i>Induction</i>	<i>PACU</i>
		<i>IntraOp</i>	<i>Acute Pain</i>

Elegant eHealth solutions for every hospital

GCC modules used in **1200** surgical operations every day

‘This state-of-the-art record has advanced the quality and credibility of records as well as being a useful teaching and audit tool. It is the anaesthetic equivalent of an aeroplane’s “black box” flight recorder.’

Princess Alexandra Hospital, Year in Review 2009-2010

Global operations

Global customers

Our customers include major teaching hospitals such as Singapore General Hospital, the Chris Hani Baragwanath Hospital in South Africa and University Hospital of Leicester Trust in the United Kingdom.

In Australia, our solutions are used by the Royal Adelaide Hospital, Lyell McEwin Hospital and Queensland Health. The Queensland Health project, covering 43 hospitals, remains the largest hospital network of its kind in the world.

By offering a scalable solution, we can implement GCC in small to medium sized hospitals, large teaching hospitals, specialist private sector practices and regional healthcare facilities.

International footprint

Getz Clinical has sales and support teams operating from seven offices in Australia, Singapore, the Philippines and the United Kingdom.

Our team of highly skilled personnel with extensive experience in providing eHealth solutions includes developers, integration specialists, project managers, clinical experts, business analysts, service delivery managers, technical writers, sales managers and account managers.

Our head office is in Singapore and our development centre is located in Adelaide in South Australia.

Latest technologies

Strategic partnerships

Getz Clinical’s strategic partnerships with leading technology companies ensure that our clinical information management systems are always developed, implemented, delivered and maintained using the latest technologies.

Our cloud service provider is Amazon Web Services, the global leader in cloud computing whose customers include the US Centres for Disease Control and Prevention (CDC), the global pharmaceutical and consumer healthcare products corporation Pfizer, Health Direct Australia and the Central Intelligence Agency (CIA).

Getz Clinical is an Amazon Web Services Partner Network (APN) Technology Partner.

Our development and database software partner is Microsoft, a worldwide leader in software, services, devices and solutions. Our clinical information management systems are built and delivered on the latest Microsoft operating systems, database and mobile device technologies and incorporate innovative technologies ahead of their release into the consumer market.

Cloud solution

All GCC modules are built and delivered as an end-to-end cloud computing service allowing for better data security and protection by utilising the latest technologies and best-practice methods.

Software updates and upgrades are automated and implemented without interruption to operations. Data storage and computing power is unlimited so GCC can scale with your business requirements. Hospital information is safely stored in secure Health Insurance Portability and Accountability Act (HIPAA)-compliant data centres ensuring disaster protection.

Elegant eHealth solutions for every hospital

Getz Clinical modules are used in **50+** hospitals and medical centres on four continents

‘We are able to use the consistent and comprehensive records to identify areas to improve outcomes and enhance patient safety.’

Associate Professor Ong Biauwei Chi, Director of Patient Safety and Clinical Governance and Senior Consultant, Department of Anaesthesiology, Singapore General Hospital

Service solution offering

GCC is delivered as a Software as a Service (SaaS) and Hardware as a Service (HaaS) subscription offering. Subscriptions ensure that our customers receive ongoing support, service delivery and the latest in product innovation. Fixes, patches and upgrades are automated so the workload on hospital IT departments is minimised.

GCC modules are accessed via purpose-built Getz Touch medical-grade hardware devices provided to our customers, or via web-based portals and mobile devices. Hardware refreshes occur every four years. Subscription packages can be upgraded easily and seamlessly. Modules can be deployed individually or in an integrated package at any time to support continuing care for patients.

Quality accreditation support

Our SaaS and HaaS offerings are compliant with the *Health Insurance Portability and Accountability Act* (HIPAA). Our solutions enable hospitals to fully audit processes and records for various health care accreditation requirements, such as Joint Commission International (JCI) accreditation.

No cost implementation

Our SaaS and HaaS subscription model is complemented by our no cost implementation program. Hospitals pay for our GCC solution only when they realise the benefits. Our month-to-month subscription offering has no lock-in contract terms. There are no upfront implementation or integration costs.

Getz Clinical Consulting

The Getz Clinical Consulting Group offers services to hospitals seeking to simplify their processes, eliminate paper records and reduce their IT costs. We offer consulting in the areas of change management, hospital integration, business process re-engineering and project management.

A member of the Getz Group
The Getz Group is a diversified business focusing on healthcare, chemicals, distribution, retailing and hotels.
